SUMMARY

- Senior Full Stack .NET Developer with **8 years of experience** in designing, developing, and supporting enterprise applications using **C#, .NET Core, ASP.NET Core Web API/Rest API, Angular, SQL Server, and Microsoft Azure**.
- Strong expertise in building scalable **RESTful APIs, microservices**, and cloud-based applications using **Azure**, following **Clean Architecture**, **SOLID principles**, and industry best practices.
- Experienced in **Angular, TypeScript, HTML5, CSS3, JavaScript**, developing responsive web applications and integrating them with secure backend services.
- Proficient in **SQL Server**, database design, stored procedures, query optimization, performance tuning, and Entity Framework.
- Hands-on experience with **Azure DevOps, Git, CI/CD pipelines, SonarQube**, automated deployments, and Agile Scrum methodologies.
- Skilled in troubleshooting production issues, improving application performance, and delivering reliable, high-quality software solutions in enterprise environments.
- Excellent problem-solving, communication, and collaboration skills with a strong commitment to continuous learning and delivering business value.

EXPERIENCE

Concentrix **Nov 2022 – Present**

Role: Software Engineer
Client: Microchip
Project: Admin Dashboard

Project Overview: Developed an enterprise Admin Dashboard for **Microchip**, used by thousands of internal users to manage microchip product information, pricing, configurations, and administrative operations. The application streamlined business workflows and improved operational efficiency through a secure, scalable web platform.

Responsibilities:

- Improved application performance by implementing efficient **pagination**, reducing page load time by **40%** and enhancing user experience.
- Identified and resolved critical issues using **Azure Application Insights**, increasing application reliability and reducing production errors by **30%**.
- Led R&D efforts to evaluate and integrate a new **API testing framework**, boosting test coverage by **50%** and accelerating the QA process by **25%**.
- Spearheaded the migration from **.NET Framework to .NET Core Web API,** resulting in **45% faster API response times** and **60% easier maintainability**.
- Provided end-to-end support for development and troubleshooting, reducing bug resolution time by **20%** through proactive monitoring and support.
- Optimized front-end performance by streamlining **third-party package usage**, reducing bundle size by **35%** and improving UI responsiveness.
- Evaluated and developed new features based on business needs, leading to **15% faster delivery of feature releases** and improved stakeholder satisfaction.
- Promoted test-driven development by integrating **xUnit-based unit testing**, leading to a **20% decrease in production issues**.

Speridian Technologies **Oct 2021 – Oct 2022**

Role: Full Stack Dot Net Developer
Client: H & R Block
Project: Blockworks Online

Project Overview: Developed and maintained **Blockworks Online**, a secure web-based tax filing platform that enables customers to prepare, file, and manage their tax returns online through a seamless digital experience.

Responsibilities:

- Reduced tax return processing time by **70%** by implementing **distributed caching** (Redis) and optimized SQL queries.
- Migrated mission-critical Taxation system from legacy **.NET Framework to cloud-native microservices**, reducing **latency by 60%.**
- Reduced IRS e-file rejection rates by **30%** via real-time validation **microservices** (Kafka, Redis) and idempotent retry logic.
- Owned end-to-end production support (SRE principles), resolving 50+critical P0/P1 incidents in TEST/PROD via root-cause analysis (RCA).
- Provide on-going support for the development, troubleshooting and support.
- Reduced server downtime by **15%** by enhancing monitoring and alert systems.
- Took ownership of maintaining coding standards by performing static code analysis with **SonarQube**, reaching **an 85% code quality score**.

MSC Technology **July 2018 – Oct 2021**

Role: Dot Net Developer
Project: OVA

Project Overview: The OVA (One Vision Agency) is a Logistics Shipment application. It is a application managed shipments containing goods ordered by international stores that leave the country (Exports) and the items imported to True Value (Imports). The application is used to generate Shipper letter of instructions, Container related Information Documents and Schedule for shipment through ships.

Responsibilities:

- Implemented core business logic in C# for route calculation and package allocation, reducing processing time by **20%**.
- Built REST APIs (.NET Core) for real-time container tracking, integrated with 3rd-party logistics (3PL) vendors.
- Designed and implemented a system for container equipment placement and real-time shipment tracking to improve logistics efficiency and visibility.
- Increased application scalability by **30%** by refactoring legacy code using modern .Net practices.
- Promoted test-driven development by integrating xUnit-based unit testing, leading to a **30%** decrease in production issues.
- Translate business requirements into technical design specifications.

EDUCATION

- B.E (CSE) from Velammal Engineering college, Chennai in the Year 2018

PERSONAL PROJECTS

- **E-Commerce Application:** Web application by using .Net core MVC and SQL. Link .
- **Payment Details (CRUD Operations):** Web Application by using .Net Core Web API, Angular and SQL. Link.

ACHIEVEMENTS

- The SQL certification from Hacker Rank.
- The JavaScript Certification from Hacker Rank.

TECHNICAL SKILLS

- **Client Side**: Angular, HTML, CSS, TypeScript.
- **Server Side:** C#, .Net Core, MVC, Entity Framework, webservices, LINQ, Rest API / Web API.
- **Solution Optimization:** Excellent experience with Algorithms, Data Structures.
- **Databases:** RDBMS, SQL Server.
- **Tools:** Visual Studio, SSMS, Visual Studio Code, Postman.
- **Cloud:** Microsoft Azure, Azure DevOps.
- **AI Tools:** ChatGPT, Claude code, GitHub Copilot, Gemini.
